EL. E. 341-01 Theory of Fields

Instructor: Dr. Paul M. Goggans, Anderson Hall Room 18, 232-5954, goggans@olemiss.edu.

Examinations: Three one-hour test (45% total) and a final examination (35%) will be given. **No make-up examinations will be given.** The instructor should be informed in advance if a student must miss an exam. If a student has already missed an exam due to an emergency, he should contact the instructor as soon as possible and provide the instructor with a written and signed statement stating the reason for missing the test. Insufficient reasons for missing an exam will lead to a reduced final grade. Do not miss an exam without a very good reason.

Homework: Homework will be assigned and taken up at regular intervals. Homework will comprise 10% of your grade. Late homework will not be accepted. Students may work together on homework, but should not copy each other's work. **Copying of homework from another student from this or a previous semester is a violation of the School of Engineering Honor Code. Your homework will be examined periodically for evidence of copying and, if evidence is found, your case will be immediately referred to the Honor Council!** Homework should be neat and orderly with the problem number, solution technique, and results clearly indicated.

Instructor Discretion: Instructor discretion will count for 10% of your grade. This part of your grade may come from announced or unannounced quizzes, test, homework and/or other assignments.

Grading: Final grades will be assigned on a 10 point scale. Grades will be scaled (if necessary) through out the semester. Grade scaling is performed at the discretion of the instructor and is not subject to question. A student may question the grading of a particular problem, addition of grades, or averaging of grades within a reasonable amount of time after a test is returned. It will be checked, returned, and considered final.

Withdrawals: The university policy regarding withdrawals will be strictly observed.

Attendance: Class attendance is up to the individual, but each student is responsible for all information (technical and otherwise) presented in class. Students missing an unannounced quiz will receive a zero on that quiz.

Course Outline: Sections 1-1 through 5-12 in the textbook will be covered in this class.
